

RADHIKA SINGH

Software Engineer | AI Engineer | Backend · AI Engineering · GenAI

radhika.singh10.01.98@gmail.com | (716) 910-7687 | [linkedin.com/in/radhika-singh-10](https://www.linkedin.com/in/radhika-singh-10) | github.com/radhika-singh-10

Software Engineer with 4+ years of experience building scalable, distributed, AI-powered systems across backend services, LLM infrastructure, and cloud platforms. A clear communicator who does her best work on fast-moving teams, owning features from design through production.

SKILLS

Languages: Python, Java, C/C++, C#, JavaScript, TypeScript

Backend: Spring Boot, FastAPI, Node.js, .NET, Microservices, Apache Kafka, RabbitMQ, Amazon SQS, Event-Driven Architecture

AI / ML: vLLM, Ollama, LLMs, RAG, LangChain, LangGraph, AutoGen, Google ADK, MCP

Cloud & Infra: AWS, Azure, Kubernetes, Docker, Terraform, Airflow, Databricks, OpenTelemetry

Tools: Claude Code, Cursor, Jenkins, GitHub Actions, ELK, Grafana K6

EXPERIENCE

Software Engineer, *Lineaje Inc, AI Security Series A Startup*

Sep 2025 – Present

- **UniFai Infrastructure:** Architected SaaS, on-prem, hybrid, and air-gapped low-code and high-code AI-driven policy evaluation and deterministic runtime remediation enforcement at **0.25 ms response time per HTTP call, cutting latency ~85% across ~18k files** for Deloitte, Wipro, and Veracode in Azure and AWS environments.
- **MCP Guardrail Server:** Built a cloud-agnostic MCP enforcement service that gates container images between GitHub and registries in CI/CD and intercepts pod traffic at runtime across Kubernetes clusters, regions, and AZs, enforcing **88 policies across 5 domains** with remediation **within 30 seconds**.
- **UniFai Pipeline:** Architected a parallelized SaaS and hybrid MCP Server-Client pipeline, scanning repos and PRs for security/compliance violations with runtime remediation fixes, processing **14k files in 36 mins at 0.95 precision** across **5+ languages** for **1M+ concurrent users**.
- **Vulnerability Elimination Scanner:** Engineered an eval harness triggering **9 attack classes** in a sandboxed environment using an agentic platform (Python, SpringBoot, AWS Bedrock, GVisor), detecting **1,000+ novel vulnerabilities** across **100+ C/C++, Java, C#, and Node OSS projects**.
- **GPU Inference Platform:** Deployed vLLM on **4x L4 GPUs**, cutting latency from 300s to ~10s, sustaining **2,000+ tokens/sec** throughput with **~70% queue backlog reduction** and **80%+ prefix cache hit rate**; benchmarked **10+ open-source models**, reducing inference costs by **~30x** while sustaining high service availability.
- **UniFai Agentic Chatbot:** Orchestrated production agentic chatbot (React, TypeScript, FastAPI, AWS) with autonomous tool and function calling, session memory, and human-in-the-loop feedback, cutting end-to-end latency by **~28 seconds** for enterprise security users.
- **ETL & Data Pipelines:** Engineered human-in-the-loop telemetry pipeline (Python, SpringBoot, PostgreSQL, S3, EKS, Lambda) routing unsupported queries to Jira within **20 seconds**; built SQS ETL pipeline ingesting **20k source files** and delivering security patches in **under 25 mins**.
- **Skill Scanner:** Led the end-to-end rollout of Skill reputation in UniFai's AI asset discovery platform, collaborating with research teams to ingest **50K+ AI skills** and operationalize reputation scoring and risk-based prioritization for enterprise AI security use cases.
- **LLM Gateway:** Built cross-provider token usage aggregation and cost estimation harness across **4 LLM providers (Anthropic, OpenAI, OpenRouter, and Bedrock)**, enabling spend forecasting and provider benchmarking using **Python, Java, React, AWS (S3, EC2, SQS)**.

Software Engineer 2, *Dell Technologies*

Jul 2020 – Jul 2023

- **CarePulse AI Platform:** Built a RAG-based platform (Python, NodeJS, React, TypeScript, RedisSearch, MongoDB, AWS, PCF) extracting semantic context from customer feedback, improving User Satisfaction to **78%** and enhancing data availability by **85%**.
- **Data Pipelines & Microservices:** Developed ELK-backed logging and notification microservices (C#, .NET, Java), reducing errors/week by **1.5x**; optimized 10+ async map-reduce aggregation services with indexing, decreasing API latency by **80%**.
- **Dell Online Returns:** Revamped streaming data flow consuming Apache Kafka and RabbitMQ (Java, Angular, TypeScript), reducing processing failures by **70%**; built 2 lazy-loaded MFEs using NodeJS, improving reusability **2x** and cutting time-to-interactive to **1.83s**.
- **Filed pending Dell Patent:** Smart Framework to Autoheal Customer Order Experience Issues (Ref. 134532.01, Nov 2023).

PROJECTS

PromptStrike CLI | *Python, Typer, Ollama, DeepSeek, Qwen, Pydantic, AST/NetworkX*

- Engineered a 5-state agent evaluation harness achieving **~98% accuracy** by eliminating false positives; developed graph-based SAST with a Human-in-the-Loop system scaling security analysis across hundreds of execution paths.

RepoGraph-AI | *React, TypeScript, FastAPI, Gemini API, MCP, Tree-sitter*

- Multi-agent intelligence platform analyzing **1,500+ source files** with 4 validation gates (syntax, architecture, security), reducing unsafe AI-generated code changes by **85%**. Presented at Google I/O Hackathon.

EDUCATION

MS in Computer Science, University at Buffalo, State University of New York

Aug 2023 – Jun 2025

B.Tech in Computer Science, KIIT University, India

Jul 2016 – May 2020

ACHIEVEMENTS & LEADERSHIP

- Dell Technologies FY23 ITDP Council Member — organized hackathons, workshops, and talks for **500+ engineers**; received **15+ awards** for engineering excellence from leadership (Oct 2020 – Jul 2023).
- Mentored junior engineers on MCP patterns, agent-native design, and code review practices; drove adoption of AI-assisted development tools (Claude Code, Cursor) within agile, CI-driven workflows across the engineering org.
